Memorial Medical Center's State-of-the Art Surgical Robot

Memorial Medical Center now offers the da Vinci® Robotic Surgical System. This robotic surgery system is designed to be the least invasive and most effective surgical option available today for certain minimally invasive procedures.

Using this advanced surgical technology, surgeons are able to offer a minimally invasive option for complex medical procedures and laparoscopy for patients who require urologic, gynecologic, cardiothoracic and general surgery procedures.

The benefits for our patients include the potential for significantly less post-operative pain, a shorter hospital stay, a faster return to normal daily activities and better clinical outcomes.

Help us provide the best possible care to our patients by making a donation.

Yes. I wish to make a gift to Memorial Medical Center Foundation to support new technology in the amount of:

\$500 _____ \$1,000 _____ \$2,500 _____ \$5,000 \$_____ Other

Lump Sum Payable over: 2 years or 3 years

Name: _____

Address: _____

City: _____ State: _____ Zip: _____ Phone: _____

Credit Card Number: _____ Expiration Date: _____

E-mail: _____
